

Evergy seeks to add more wind energy

Midwest projects of 50 MW or larger requested

KANSAS CITY, Mo. – Oct. 18, 2021 – Evergy (NYSE: EVRG), today issued a Request for Proposals (RFP) for wind energy to supply the needs of its customers.

The RFP solicits bids for Evergy's purchase of wind resources of up to 1,000 megawatts (MW) that will be in service by 2026. Projects that achieve commercial operation by mid-2024 and year-end 2025 will be given preference. Wind resources must be a minimum of 50 MW and interconnect to the Southwest Power Pool (SPP). Siting preference will be given to projects located in Kansas.

Proposals are due by Nov. 23, 2021. Response and contact information are available online at www.evergy.com/2021rfp. Proposals selected from the RFPs are subject to appropriate regulatory approvals.

Evergy has outlined its plan to expand ownership of renewable energy and to retire fossil-fueled generation as the company works toward its 2045 target for net zero carbon emissions. These wind projects would fulfill the plan to add up to 1,000 MW of wind energy by 2026 with projects that benefit from production tax credits.

About Evergy, Inc.

Evergy, Inc. (NYSE: EVRG) serves approximately 1.6 million customers in Kansas and Missouri. We were formed in 2018 when long-term local energy providers KCP&L and Westar Energy merged. We generate nearly half the power we provide to homes and businesses with emission-free sources. We support our local communities where we live and work, and strive to meet the needs of customers through energy savings and innovative solutions.
